The trigonometric functions can be written as ratios involving \sin , \cos , and \tan . The trigonometric functions are periodic. The sine, cosine, secant, and cosecant functions have period 2π . The tangent and cotangent functions have period π .

Trigonometric Functions Definition. The number of radians in the central angle $\angle AOCB_0$ within a circle of radius r is defined as the number of "radius units" contained in the arc s subtended by the central angle. With the central angle measuring θ radians, this means $\theta = s/r$ or $s = r\theta$. Figure 1.38, Page 22 Note.

If a , b , and c are sides of a triangle ABC with angle A opposite a , angle B opposite b , and angle C opposite c , then $\frac{\sin A}{a} = \frac{\sin B}{b} = \frac{\sin C}{c}$. Note. Trigonometry is based on certain ratios, called trigonometric functions, to be defined in the next chapter. The early applications of the trigonometric functions were to surveying, navigation, and engineering. These functions also play an important role in the study of all sorts of vibratory phenomena—sound, light, electric-ity, etc.

An angle made up of the sum or difference of two or more angles is called compound angles. The basic results in direction are called trigonometric identities as given below:
(i) $\sin (x + y) = \sin x \cos y + \cos x \sin y$. (ii) $\sin (x - y) = \sin x \cos y - \cos x \sin y$. (iii) $\cos (x + y) = \cos x \cos y - \sin x \sin y$.
