In terms of efficiency, there isn ' t much that can beat a hybrid. Hybrid refers to the fact that these engines pull power from a combination of two different sources: electric and gas.

Advances in Engine Technology | Engine World

GM and Mercedes are two companies that have done extensive tests and are two major proponents of this technology. OPOC two stroke. OPOC stands for " opposed piston opposed cylinder " and is one of the most radical and the most promising engine design on this list. The engine has geometry like that of the flat engine utilised by Porsche or Subaru. However, in this case there are additional set of pistons that oppose the conventional pistons within the comparatively longer cylinders.

Advance Engine Technology In Two Wheeler

Advanced steam technology (sometimes known as modern steam) reflects an approach to the technical development of the steam engine intended for a wider variety of applications than has recently been the case. Particular attention has been given to endemic problems that led to the demise of steam power in small- to medium-scale commercial applications: excessive pollution, maintenance costs ...

Advanced steam technology - Wikipedia

A book for students and lecturers covering all types of automobile engine, 'Advanced Engine Technology' provides a comprehensive reference for anyone studying the way in which modern vehicle engines work, and why they are designed as they are. The author deals with the full range of engines encountered in production vehicles (petrol and diesel ...

Advanced Engine Technology: Amazon.co.uk: Heisler MSc BSc ...

Cylinder deactivation technology has been used on V-8-powered cars and trucks for the past few years, but some car makers are starting to add it to their six-cylinder engines, too. It's estimated that cylinder deactivation technology can improve engine efficiency by 7.5 percent [source: U.S. Department of Energy ].

5 New Gas Engine Technologies | HowStuffWorks

Two-stroke engines are found in small devices such as chain saws, dirt bikes, and snowmobiles because they have 3 important advantages over four-stroke engines: • Two-stroke engines don't have valves, which simplifies their construction and lowers their weight. • Two-stroke engines fire once every revolution (four-stroke engines fire

ADVANCED TWO-STROKE TUNED EXHAUST SYSTEM

The ADaptive Versatile ENgine Technology (or ADVENT) program is an aircraft engine development program run by the United States Air Force with the goal of developing an efficient adaptive cycle, or variable cycle, engine for next generation military aircraft in the 20,000 lbf (89 kN) thrust class. The program was succeeded by the Adaptive Engine Technology Demonstrator ( AETD) program in 2012 and the Adaptive Engine Transition Program ( AETP) in 2016, with the latter focused on developing ...
