For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

Updated handbook to explain the fundamental business, legal, and technical issue surrounding electromagnetic spectrum use today.

This manual lymph drainage guide covers the anatomy, physiology, and pathophysiology of the lymphatic system, providing key background information necessary for effective treatment. Chapters are structured according to anatomic regions, focusing on the lymphatic knots and their tributary regions in the throat, armpit, trunk, and groin. Photographs illustrate the lymphatic knots and lymphatic courses, which are drawn on the human body, and provide a clear picture of the structures to be treated. Designated points are numbered to illustrate the progression of treatment in each region. Also includes coverage of complete decongestive therapy (CDT). Explains procedures in a detailed, step-by-step format. Features a helpful chart of lymph node groups and their tributary regions that outlines each lymph node as it pertains to a specific anatomical region. Key information is summarized in the margins, making it easier for readers to review what they've read and focus on important topics. Self-test questions provide an excellent means for readers to assess their comprehension and review key material in the book. These questions are also helpful in preparing for exams. Two-color illustrations help the reader visualize and learn theoretical aspects of this therapy. The text has been completely updated to reflect the latest techniques in lymph drainage therapy. Coverage of individual treatment strokes and stroke sequences have been updated, with more comprehensive descriptions and detailed photos that illustrate proper hand placement, pressure, and movement. Expanded coverage of complete decongestive therapy, including a CDT survey — consisting of the case history, examination, and palpation — that can be used to gather valuable information to formulate therapeutic goals and evaluate treatment results.

This book focuses on key simulation and evaluation technologies for 5G systems. Based on the most recent research results from academia and industry, it describes the evaluation methodologies in depth for network and physical layer technologies. The evaluation methods are discussed in depth. It also covers the analysis of the 5G candidate technologies and the testing challenges, the evolution of the testing technologies, fading channel measurement and modeling, software simulations, software hardware cosimulation, field testing and other novel evaluation methods. The fifth-generation (5G) mobile communications system targets highly improved network performances in terms of the network capacity and the number of connections. Testing and evaluation technologies is widely recognized and plays important roles in the wireless technology developments, along with the research on basic theory and key technologies. The investigation and developments on the multi-level and comprehensive evaluations for 5G new technologies, provides important performance references for the 5G technology filtering and future standardizations. Students focused on telecommunications, electronic engineering, computer science or other related disciplines will find this book useful as a secondary text. Researchers and professionals working within these related fields will also find this book useful as a reference.

This casebook demonstrates that the future of global business lies in how well the multinational landscape is charted and how the importance of Asian market leaders is deeply embedded in it. It offers international management students and researchers an extensive guide to the business history, strategy development, and foreign market entry modes used by emerging Asian multinationals. The cases focus on well-known companies such as Lenovo, Alibaba, Infosys, Huawei, Panasonic, and Rakuten. These companies, all of which generate huge revenues in their own countries (e.g. in China, India, South Korea, Taiwan, Vietnam), are now becoming increasingly sophisticated and striving to become global brands, while also enjoying the active support of their governments in terms of their international business. Readers will learn about the current multinational landscape in Asia, the management challenges, and the future implications for traditional western companies seeking to retain their market share. Chapters on corporate entrepreneurship, human resource management and intercultural competence, and current branding trends in Asia will provide a cutting-edge update on international business strategy for students and practitioners alike.
