With roots planted firmly in the industrial age, the corporate ladder has been the metaphor used to describe the prevailing one-size-fits-all model for success. At its heart, the ladder is derived from inflexible, hierarchical, organization models in which prestige, individual rewards, information flow, power and influence are tied to the rung each employee occupies. Yet the workplace as we know it is in transition -- evolving away from the linear, one-size-fits-all model of the corporate ladder toward a multidimensional approach that Cathy Benko calls the corporate lattice. This book will serve to widen an organization's strategic lens, representing a fundamentally new way to work and run a company. It offers a framework to help senior leaders and HR directors harness the talent in their company in a way that provides a strategic advantage, not only for recruiting but also for achieving and maintain better individual performance. In the bestselling book Mass Career Customization (Harvard Business Press/2007), Cathy Benko and Deloitte provided the breakthrough MCC dashboard for understanding the important variables of individual employees' career-life profiles, but she also coined a new metaphor -- the corporate lattice -- as a way to think about the changed career landscape. This book delves much deeper into the power of the lattice for organizations, fully exploring its contours and applying it to real-life practice throughout a company. It explores how the corporate lattice model creates value by: 1. Ensuring a flow of talent into and through the organization. 2. Increasing the efficiency of and return on organizational investments. 3. Improving financial and operating results through greater employee engagement. The three-part framework of the book presents specific ways managers and organizations can use The Corporate Lattice to manage talent, measure results, collaborate across teams, engage employees, and reor"

Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some chores are either offshored or given to robots. A better world of for jobs cannot be warranted – a lot will be contingent on devising the right policies and institutes in place.
