Elementary differential geometry is centered around problems of curves and surfaces in three dimensional euclidean space. We're using Barret Oneil's excellent text this semester. Oneil uses linear algebra and

differential forms throughout his text. I am excited about learning the method of moving frames for surfaces in 3-space.

Math 497: Special Topics in Elementary Differential Geometry

closely echo Barrett O'neill's classic Elementary Differential Geometry revised second edition. I taught this course once before from O'neil's text and we found it was very easy to follow, however, I will diverge from his presentation in several notable ways this summer. 1. I intend to use modern notation for vector fields.

O'Neill also includes many more exercises for practice than McCleary. Both books have quality exercises, but O'Neill also has sheer quantity working for his text. If you're feeling passionate about getting into the subject of differential geometry, and modern geometry in general, I cannot highly recommend using both books together enough.

Elementary Differential Geometry O Solution
Overview. The Kerr metric is a generalization to a
rotating body of the Schwarzschild metric, discovered

by Karl Schwarzschild in 1915, which described the geometry of spacetime around an uncharged, spherically-symmetric, and non-rotating body. The corresponding solution for a charged, spherical, non-rotating body, the Reissner–Nordström metric, was discovered soon afterwards (1916–1918).
