and works thorough even the most advanced topics in medical office management. With a special focus on leadership, and a logical progression through the topics, this has the makings of a faculty member's most trusted resource for this course.

In this book, Phelps and Parente explore the US health care system and set out the case for its reform. They trace the foundations of today's system, and show how distortions in the incentives facing participants in the health care market could be corrected in order to achieve lower costs, a higher quality of care, a higher level of patient safety, and a more efficient allocation of health care resources. Phelps and Parente propose novel yet economically robust changes to US tax law affecting health insurance

coverage and related issues. They also discuss a series of specific improvements to Medicare and Medicaid, and assess potential innovations that affect all of health care, including chronic disease management, fraud and abuse detection, information technology, and other key issues. The Economics of US Health Care Policy will be illuminating reading for anyone with an interest in health policy, and will be a valuable supplementary text for courses in health economics and health policy, including for students without advanced training in economics.

With the rapid increase in the implementation of e-Government in Africa and across the world, the need to investigate the key bottlenecks (issues) caused by the failure of a large number of e-Government projects cannot be ignored. The main purpose of this book is to contribute to the current scholarly and intellectual discourse on different aspects of e-

Government such as understanding the critical issues in design, implementation and monitoring. This book specifically intends to bring out contextual issues that hugely impact on the probability for e-Government failure or success. It also differentiates itself by carefully exploring the issue of context-awareness (informed by the local context) for e-Government design and implementation, which has not been pursued in any publication in e-Government before, although it has been used in other information computational contexts. Therefore, the many theses within this book are concerned with e-Government design approaches, implementation policies and requirements, and monitoring dimensions need to be informed by the contextual characteristics in which they are implemented. This book

contributes to the body of knowledge by presenting an in-depth analysis of a case of e-Government implementation. Therefore, this book has its facts backed by intermittent reference to an empirical study done in Zambia to accentuate issues in design, adoption, usage and monitoring of e-Government projects. The case articulates the methodological issues in the design and measurement of e-Government. The use of a combination of structural equation modelling (SEM), exploratory factor analysis (EFA) and advanced techniques such as principal component analysis (PCA) in investigating different aspects of e-Government in a developing country context has not been done in any previous research. The novel methodological nuances articulated in

this book can go a long way toward understanding the factors explaining successful implementation of e-Government. Previous publications have used basic statistical approaches devoid of adequate scientific or statistical rigour such as descriptive statistics to arrive at factors influencing the success or failure of e-Government. Furthermore, this book contributes to the body of knowledge by emphasising the different dimensions and issues of the multidimensional perspectives of e-Government. The book explores tangible pointers for design and implementation of e-Government, giving it the thrust to potentially guide actual implementation of e-Government in African setups.

Centricity upends some of our most fundamental beliefs about customer service, customer relationship management, and customer lifetime value. Despite what the old adage says, the customer is not always right. Even companies that can seemingly do no wrong—like the coffeehouse giant Starbucks—have only recently started to figure this out. Starbucks is one of many companies that has successfully executed a pivot that puts the company in a customer-centric mindset, an approach that Wharton professor Peter Fader describes in *Customer Centricity*. Fader advocates that in the world of customer centricity, there are good customers — and then there is pretty much everybody else. In a new preface and afterword to *Customer Centricity*, Fader reflects on how the landscape has changed over

nearly a decade since he first proposed that businesses radically rethink how they relate to customers. Using examples from Starbucks, Nordstrom, and more, Fader provides insights to help you understand: Why customer centricity is the new model for success in today's data-driven environment. How the ideas of brand equity and customer asset value help us understand what kinds of companies naturally lend themselves to the customer-centric model and which ones don't; Why the traditional models for determining the value of individual customers are flawed; How executives can use customer lifetime value (CLV) and other customer-centric data to make smarter decisions about their companies; How the well-intended idea of customer relationship management (CRM) lost its way—and

Managers and leaders know that customer centricity means providing positive customer experiences. But what if that's not enough? In the current age, where Millennials and

Get Free Centricity Practice Solution 10 User Guide

Generation Z are shaping the very fabric of society and business, to remain relevant, organisations must provide more than occasional good experiences. A narrow focus on short-termism, excessive tech automatisations and outdated product mentalities are a liability to customer centricity. We need businesses that are willing to radically change, embrace a long-term, customer-focussed perspective, and are able to create value for all stakeholders. In Journey to Centricity, Ilenia Vidili instils a customer-oriented vision from the C-suite beyond, to transform your day-to-day operations and culture through three pillars: Humanity. Make your brand more human by embracing a higher purpose, an empathic human touch and sustainable corporate responsibility. Technology. Apply the

necessary tools as enablers to ease of use, hyper-personalisation and innovation to improve your customers' lives. Culture. Invest effort in changing old-style mindsets that improve your culture and fortify your brand, to create a place where employees feel motivated, valued and appreciated. Drawing on B2C practical advice from Ilenia's first-hand interviews with leaders of world-class organisations such as illycaffè, Enel, Polestar, Forrester and Bain & Co, this book lays out a customer-centric framework for thriving in the new era of stakeholder capitalism. Receive a powerful call to action to combat old paradigms, improve customer focus, create value for all stakeholders and contribute to a sustainable business world.
