Box 1 Placing a nasogastric tube. Explain the procedure to the patient. Mark the tube at a distance equal to that from the xiphisternum to the nose via the earlobe (50 – 60 cm). Lubricate the tube externally with gel/water and internally with water if a guidewire is present. Check the guidewire....

Guidelines for enteral feeding in adult hospital patients—

As starvation leads to atrophy of the gut, withholding feeds may render subsequent feeding less safe and protract the time to reach full enteral feeding. (2) A systematic review of 10 trials of early introduction of feeding conducted in 2005 (9) concluded that early introduction of feeding did not increase the incidence of NEC and shortened the time to both full feeds and discharge.

Enteral feeding of pre-term infants

Enteral feeding formulae are about 70-80% water and the remainder of the volume consists of solids that are not used as fluid by the body. For accurate calculation of fluid input (eg to meet requirements, or for fluid restrictions), it is important to use the formula 's actual water content, not the total volume of formula being given.

Enteral nutrition manual for adults in health care facilities

Dependent on feeding protocol: continuous, intermittent or bolus. Monitor blood glucose pre feed and then every 4 – 6 h when using subcutaneous insulin and continuous feed. If intermittent feeding, monitor blood glucose pre feed, every 4 – 6 h during feed, and every 2 h post feed.

Glycaemic management during the inpatient enteral feeding—

Enteral feeding pumps should be prioritised to patients on NIV / CPAP so that the feed can be continuously infused at a precise rate. Gravity drip feeding can be considered if no enteral feeding pumps are available, however bolus feeding should not be used due to a possible increase in risk of aspiration.

Route of Nutrition Support in Patients Requiring NIV—

In the medical setting, the term enteral feeding is most often used to mean tube feeding. A person on enteral feeds usually has a condition or injury that prevents eating a regular diet by mouth....

Enteral Feeding: Definition, Types, Procedure, Indications—

Enteral feedings deliver nourishment through a tube directly into the GI tract. They 're ordered for patients with a functioning GI tract who can 't ingest enough nutrition orally to meet their needs. The feeding tube may stay in place as briefly as a few days or permanently, until the patient 's death. (See Indications for enteral feeding.) ...
