Control System Problems: Formulas, Solutions, and Simulation Tools Next we apply transformations 1 and 3 to the loop that contains the transfer function as feedback and get the following block diagram: X(s) H3(s) Similarly, by applying transforms 1 and 3 we obtain the simplified block dia- gram that represents the system's transfer function. X(s)

This may be a bulk solids or powder flow problem, and it can be caused by too much abrasion or improper system construction. Solution: Slower speeds, stronger system. This flow control solution can be implemented by either slowing down the product or reinforcing the system. Lower drive speed; Install larger feeder to slow materials
