Clinical Overview of the Immune System - dummies  
Immunology for dummies-a painless review of basic concepts (Proceedings) The immune system has two arms of defense, nonspecific and specific. As with the immune system in total, there are many elements of the nonspecific arm of the immune response. These have in common their lack of strict recognition of foreign material and absence of memory.

Immunology for dummies-a painless review of basic concepts ...  
Immune System Basics. The main players. Anything that causes an immune response is called an antigen. An antigen may be harmless, such as grass pollen, or harmful, such as the flu virus. Disease-causing antigens are called pathogens. The immune system is designed to protect the body from pathogens. In humans, the immune system begins to develop in the embryo.

Introduction to Immunology Tutorial  
2. Immunology. • Immunology. – the study of how the body fights disease and infection. • Immunity. – State of being able to resist a particular infection or toxin. 3. Overview. • Function of defences • Immune response to infection and vaccines • Generating specific immunity • Enhancing the immune defences.

Understanding basic immunology  
Basic Immunology. The immune system, defined in the simplest terms, is the system in our bodies that defends us against infectious disease. However, our immune systems are far more complex. Not only does it defend us against pathogens, it is also responsible for protecting us against cancer, initiating allergy symptoms, and determining the state of our general health.

The Basics of the Immune System | Immunopaedia  
The immune system is made up of specialized organs, cells, and tissues that all work together to destroy these invaders. Some of the main organs involved in the immune system include the spleen, lymph nodes, thymus, and bone marrow. How does it work? The immune system develops all kinds of cells that help to destroy disease causing microbes.

Biology for Kids: Immune System  
he immune system is a network of cells, tissues\*, and organs that work together to defend the body against attacks by "foreign" invaders. These are primarily microbes (germs)—tiny, infection-causing organisms such as bacteria, viruses, parasites, and fungi. Because the human body provides an ideal environment for many microbes, they try to break in.

Immunology For Dummies | unite005.targettelecoms.co  
There are three kinds of immunity: Passive: Passive immunity is a temporary immunity that comes from another body, such as from the mother through the placenta or breast milk. Passive immunity typically disappears 6 to 12 months after birth. Innate: Innate immunity is the immunity you were born with.
