The popularity of coloring books have recently grown by leaps and bounds. Coloring books are no longer only loved by children, adults are finding themselves pulling out the crayons too. It might not be widely known, but psychologists have been using coloring books as relaxing techniques since the early 20th century. When we color, we are using multiple parts of our brain. Having cerebral palsy, my body is constantly in motion. Sometimes I will catch myself wanting to doodle on a piece of paper, even though I have to use a computer for everything. But after researching on the calming effects of coloring, I have found what I always needed. When my hands and my brain are focused on coloring, the other parts of my body begin to relax. In this volume of whimsy word search: teasing both sides of the brain, there are 60

original puzzles. So pull out your crayons and let the word search and coloring begin. With different levels of difficulties, let your brain decide on how detailed you want to let the puzzles get. From a simple line through a found word to coloring each letter, the creative possibilities are endless. So pull out your crayons and start enjoying the benefits of coloring.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

This textbook is targeted to undergraduate students in chemical engineering, chemical technology, and biochemical engineering for courses in mass transfer, separation processes, transport processes, and unit operations. The principles of mass transfer, both diffusional and convective have been comprehensively discussed. The application of these principles to separation processes is explained. The more common separation processes used in the chemical industries are individually described in separate chapters. The book also provides a good understanding of the construction, the operating principles, and the selection criteria of separation equipment. Recent developments in equipment have been included as far as possible. The procedure of equipment design and sizing has been illustrated by simple examples. An overview of different applications and aspects of membrane separation has also been provided. 'Humidification and water cooling', necessary in every process industry, is also described. Finally, elementary principles of 'unsteady state diffusion' and mass transfer accompanied by a chemical reaction are covered. SALIENT FEATURES :

- A balanced coverage of theoretical principles and applications.
- Important recent developments in mass transfer equipment and practice are included.
- A large number of solved problems of varying levels of complexities showing the applications of the theory are included.
- Many end-chapter exercises.
- Chapter-wise multiple choice questions.
- An Instructors manual for the teachers.
