to represent the extracted semantic networks and background knowledge about the actors and issues in the network, using Semantic Web techniques to deal with multiple issue categorisations and political roles and functions that shift over time. It shows how this combined network of message content and background knowledge can be queried and visualized to make it easy to answer a variety of research questions. Finally, this book describes the AmCAT infrastructure and iNet coding program for that have been developed to facilitate managing large automatic and manual content analysis projects.

It addresses a whole range of interactions that can be found on the Net: the web page, chat rooms, instant messaging, social networking sites, 3D virtual worlds, blogs, videoconference, e-mail, Twitter, etc. Of special interest is the role of intentions and the quality of interpretations when these Internet-mediated interactions take place, which is often affected by the textual properties of the medium. The book also analyses the pragmatic implications of transferring offline discourses (e.g. printed paper, advertisements) to the screen-framed space of the Net. And although the main framework is cognitive pragmatics, the book also draws from other theories and models in order to build up a better picture of what really happens when people communicate on the Net. This book will interest analysts doing research on computer-mediated

Social decentering theory was developed in response to the confusion created by the use of the term empathy and to a lesser extent, perspective-taking, to reflect a wide and varied set of human cognitive processes and behaviors. Theory of Social Decentering: A Theory of Other-Orientation Encompassing Empathy and Perspective-Taking, presents an innovative approach to the social cognitive process by which humans take into consideration the thoughts, feelings, behaviors, and dispositions of other people. The

multidimensional theory and measure of social decentering represents a unifying theory that identifies and incorporates key elements imbedded in other-oriented terms. The first chapters present the theory and development of a measure of social decentering in a complete and detailed manner examining the important role that social decentering plays in human communication. The remaining chapters of the book examine the role that social decentering, empathy, and perspective-taking play in the development and management of interpersonal relationships, in marital relationships, in teams and group interactions, and in the workplace. The final chapter examines the negative consequences to individuals, decisions, and relationships potentially created by engaging in social decentering. The appendices include copies of the

measure of social decentering and the measure of relationship-specific social decentering. The book is of interest for graduates in communication studies, psychology, and sociology, and valuable for communication and social psychology scholars interested in empathy or perspective taking.

Established by Congress in 1901, the National Bureau of Standards (NBS), now the National Institute of Standards and Technology (NIST), has a long and distinguished history as the custodian and disseminator of the United States' standards of physical measurement. Having reached its centennial anniversary, the NBS/NIST reflects on and celebrates its first century with this book describing some of

its seminal contributions to science and technology. Within these pages are 102 vignettes that describe some of the Institute's classic publications. Each vignette relates the context in which the publication appeared, its impact on science, technology, and the general public, and brief details about the lives and work of the authors. The groundbreaking works depicted include: A breakthrough paper on laser-cooling of atoms below the Doppler limit, which led to the award of the 1997 Nobel Prize for Physics to William D. Phillips The official report on the development of the radio proximity fuse, one of the most important new weapons of World War II The 1932 paper reporting the discovery of deuterium in experiments that led to Harold Urey's 1934 Nobel Prize for Chemistry A review of the development of the
