9780132275590, black lamb and grey falcon part 2 of 3

This is the first book on DNA computing, a molecular approach that may revolutionize computing-replacing silicon with carbon and microchips with DNA molecules. The book starts with an introduction to DNA computing, exploring the power of complementarity, the basics of biochemistry, and language and computation theory. It then brings the reader to the most advanced theories develop thus far in this emerging research area.

This book is a collection of selected peer-reviewed papers presented at the International Conference on Signal Processing and Communication (ICSC 2018). It covers current research and developments in the fields of communications, signal processing, VLSI circuits and systems, and embedded systems. The book offers in-depth discussions and analyses of latest problems across different sub-fields of signal processing and communications. The contents of this book will prove to be useful for students, researchers, and professionals working in electronics and electrical engineering, as well as other allied fields.

Partial contents: Linear and Nonlinear Polarizability: A Primer; Second-Order Nonlinear Optical Processes in Molecules and Solids; Third-Order Nonlinear Optical Effects in Molecular and Polymeric Materials; Nonlinear Optical Properties of Molecules and Materials; Electronic Hyperpolarizability and Chemical Structure; Electrooptic Polymer Waveguide Devices: Status and Applications; Waveguiding and Waveguide Applications of Nonlinear Organic materials; Nonlinear Optical materials: The Great and Near Great; Donor- and Acceptor-Substituted Organic and Organometallic Compounds: Second-Order Nonlinear Optical Properties; Use of a Sulfonyl Group in Materials for Nonlinear Optical Materials: A Bifunctional Electron Acceptor.

Yoruba, a major West African language spoken by over twelve million people, has had so much scholarly attention before the release of this 1966 work, but no extensive descriptive grammar had ever been published. Dr Ayo Bamgbose therefore made a major contribution to the study of language. This descriptive grammar derives from a large body of written and spoken texts in Standard Yoruba. In order to avoid the faulta of traditional grammars, this study has been deliberately based on a structural theory, using Halliday's Scale and Category model. Dr Bamgbose's study of Yoruba was the first full-length exemplification of this theory to be published, and will continue to be of interest to general linguists as well as to specialists in West African languages and Yoruba scholars.

A new edition with a modified syllabus and extensive new material.
