A series of essays taking an account of the milestones of South African democracy in order to give a multidimensional perspective of South Africa. The death of Nelson Mandela on 5 December 2013 was in a sense a wake-up call for South Africans, and a time to reflect on what has been achieved since 'those magnificent days in late April 1994' (as the editors of this volume put it) 'when South Africans of all colours voted for the first time in a democratic election'. In a time of recall and reflection it is important to take account, not only of the dramatic events that grip the headlines, but also of other signposts that indicate the shape and characteristics of a society. The New South African Review looks, every year, at some of these signposts, and the essays in this fourth volume of the series again examine and analyse a broad spectrum of issues affecting the country. They tackle topics as diverse as the state of organised labour; food retailing; electricity generation; access to information; civil courage; the school system; and - looking outside the country to its place in the world - South Africa's relationships with north-east Asia, with Israel and with its neighbours in the southern African region. Taken together, these essays give a multidimensional perspective on South Africa's democracy as it turns twenty, and will be of interest to general readers while being particularly useful to students and researchers.

This book presents the proceedings of the IUPESM World Biomedical Engineering and Medical Physics, a tri-annual high-level policy meeting dedicated exclusively to furthering the role of biomedical engineering and medical physics in medicine. The book offers papers about emerging issues related to the development and sustainability of the role and impact of medical physicists and biomedical engineers in medicine and healthcare. It provides a unique and important forum to secure a coordinated, multileveled global response to the need, demand and importance of creating and supporting strong academic and clinical teams of biomedical engineers and medical physicists for the benefit of human health.

Schonland: Scientist and Soldier is a biography of Sir Basil Schonland FRS (1896-1972). Schonland was a major contributor to twentieth-century British and Commonwealth science, both in peace and war. This is not just a scientific biography, but a biography that tells much of a highly placed scientist and administrator, of the increasing engagement between science and the military, and of changing military-diplomatic relationships between Britain and South Africa. The author has drawn on a profusion of primary and secondary source material, from both South African and British archives, to produce a fine biography that is very readable and interesting.
