Nevertheless it remains a surprisingly useful source of techniques for designing and analyzing pulse and digital circuits, such as still come up in the design of timing circuits with the ubiquitous 555 integrated circuit, and for Schmitt triggers and line drivers.

The reflected radar energy is detected by radar pulse receivers which use both pulse and digital circuits together. The pulse and digital circuits in radar pulse receivers are used to show the location and distance of objects which have reflected the radar transmitter's high powered pulses.

A digital circuit is used to alter the waves into pulse waves. It measures a waveform thousand of times every second and stores the data in binary form. For instance, after 12msecs, a signal might be 2.4 volts high & after 14msecs, it might be at 2.6 volts.
