If the order ν of the Bessel differential equation is an integer, the Bessel functions $J_\nu(x)$ and $J_{-\nu}(x)$ can become dependent from each other. In this case the general solution is described by another formula: $y(x) = C_1 J_\nu(x) + C_2 Y_\nu(x)$, where $Y_\nu(x)$ is the Bessel function of the second kind.

The Bessel differential equation is the linear second-order ordinary differential equation given by $x^2(d^2y)/(dx^2) + x(dy)/(dx) + (x^2 - n^2)y = 0$. (1) Equivalently, dividing through by x^2 , $(d^2y)/(dx^2) + 1/x(dy)/(dx) + (1 - (n^2)/(x^2))y = 0$.

Although Bessel functions $J_\nu(x)$ are of interest primarily as solutions of Bessel's differential equation, Eq. (8.62), $x^2 \frac{d^2 J}{dx^2} + x \frac{dJ}{dx} + (x^2 - \nu^2) J = 0$, it is instructive and convenient to develop them from a generating function, just as for Legendre polynomials in Chapter 11.1 This approach has the advantages

(13) The general solution of the Bessel equation of order zero for $x > 0$ is $y = c_1 J_0(x) + c_2 Y_0(x)$. Note that $J_0(x) \sim 1 - \frac{x^2}{4}$ and that $Y_0(x)$ has a logarithmic singularity at $x = 0$; that is, $Y_0(x)$ behaves as $(2/\pi) \ln x$ when $x \rightarrow 0$ through positive values.

Bessel's equation Frobenius' method $y(x)$ Bessel functions It follows that $y = c_1 J_\nu(x) + c_2 Y_\nu(x) = c_1 J_\nu(x) + c_2 Y_\nu(x)$ gives the general solution to the parametric Bessel equation. Because $\lim_{x \rightarrow 0^+} Y_\nu(x) = \infty$, we find that $y(0)$ is finite $c_2 = 0$, so that the only solutions that are defined at $x = 0$ are $y = c_1 J_\nu(x)$.

Some differential equations can only be solved with power series methods. One such example is the Laguerre equation. This differential equation is important in quantum mechanics because it is one of several equations that appear in the quantum mechanical description of the hydrogen atom. The solutions of the Laguerre equation are called the Laguerre polynomials, and together with the solutions of other differential equations, form the functions that describe the orbitals of the hydrogen atom ...
