TCP provides to applications a method of easily making use of IP, while filling in the capabilities that IP lacks. It allows TCP/IP devices to establish and manage connections and send data reliably, and takes care of handling all the potential "gotchas" that can occur during transmission so each application doesn't need to worry about such matters.

you know that TCP/IP is the glue that holds the Internet and the Web together. As well as being familiar with security terms and general definitions, you need to pay attention to RFCs (Requests for Comment) published by the Internet Engineering Task Force. You can comment on, learn from, and submit RFCs yourself.
