Within the above are details of all the calibration parts (jets, chokes etc) available by Weber carburettor type including the part number (and how to determine a size from the part number) The guide contains many diagrams showing how specific types of Weber carburettor work and how to adjust them. All the main types of Weber carburettor have exploded diagrams showing the part numbers of all the genuine Weber component parts.

Weber Tuning Manual | Webcon UK Ltd

There are alot of theories about setting idle mixture adjustment on a Weber carb to determine Rich or Lean jetting...A Weber will run correctly with the mixture screws from 1/2 turn to 3 turns out...The late style DCOE carbs with the extra Air Bleed Screws on the top take 2.5 to 3 turns to operate correctly...So you cannot say that because it is 1/2 turn out that you need smaller jets...You need to find what is right for that particular engine...An engine with a strong vacuum signal will ...

IMPORTANT TECHNICAL ARTICLE...Jetting and Tuning Weber Carbs.

Selection and tuning of Weber DCOE carburetors. A very popular modification for kit car owners is the fitment of twin Weber DCOE or DCO/SP carburetors; these not only deliver the goods but also look very good. A good deal of mystique surrounds Webers, specifically Weber jetting and tuning. However Weber DCO series carbs are not as complicated as you might imagine, and whereas there is no substitute for a good rolling road session to tune them, there is much you can do to tune them yourself ...

Selection and tuning of Weber DCOE Carburetors

Tuning the idle is perhaps the simplest task in tuning Weber IDAs, but even the simplest task can get complicated. The first step is to make sure that the carbs are synchronized. This is discussed in a separate section. The next step is to establish "lean best idle". This can fairly easily be done by ear, though it may take some practice.

Tuning Webers

Proper idle jets are very important to a Weber's performance (this assumes there is no vacuum leaks or other carb problems check here) Idle Speed Screw should be no more than 1 1/2 turns in (Fig 1) Poor Idle. Good Idle. Mixture Screw Less than 1 turns out: Go down on the primary idle jet : Mixture Screw more than 2 turns out
