[Step #1: Design Your Network](#). First things first - you'll need to decide how many rooms you want to run your wired internet through. This will determine much of your price, because it will dictate how many feet of cable you'll need to buy.

How to Create a Wired Network at Home - Quick and Dirty Tips

Use routers that support the latest standard version of Wi-Fi (currently, 802.11ac). If your network includes, or will include in the near future, more than one client that connects through 5 GHz Wi-Fi, use a tri-band Wi-Fi router.; Determine whether your home network should have a single router only, whether you should use a two-router setup, or whether you need a mesh network system.

How to Build and Maintain the Best Home Network

But more importantly, it can talk 5G and 802.11ac so in other words, it's a modern-day spec wifi access point. It's not quite as fast or has as long a range as the UAP-AC-PRO devices I put in my home, but it doesn't need to either when the scope of coverage is predominantly the room it's mounted in.

Troy Hunt: Wiring a home network from the ground-up with ...

[Wireless Router Network Diagram](#). All devices that connect to a wireless router must possess a working network adapter. Connecting the router to a broadband modem that has one or more built-in adapters enables the wireless sharing of a high-speed internet connection. Wireless routers technically allow dozens of computers to connect over Wi-Fi links.
